

# Georgescu Teodor: Websites Portfolio

This presentation showcases a collection of websites developed by me using WordPress. Each project highlights a different creative and technical approach — from business websites and personal blogs to promotional game pages. Through these projects, I explored responsive design, user experience, and content structuring while continuously improving my web development skills.

# COMPANY WEBSITE

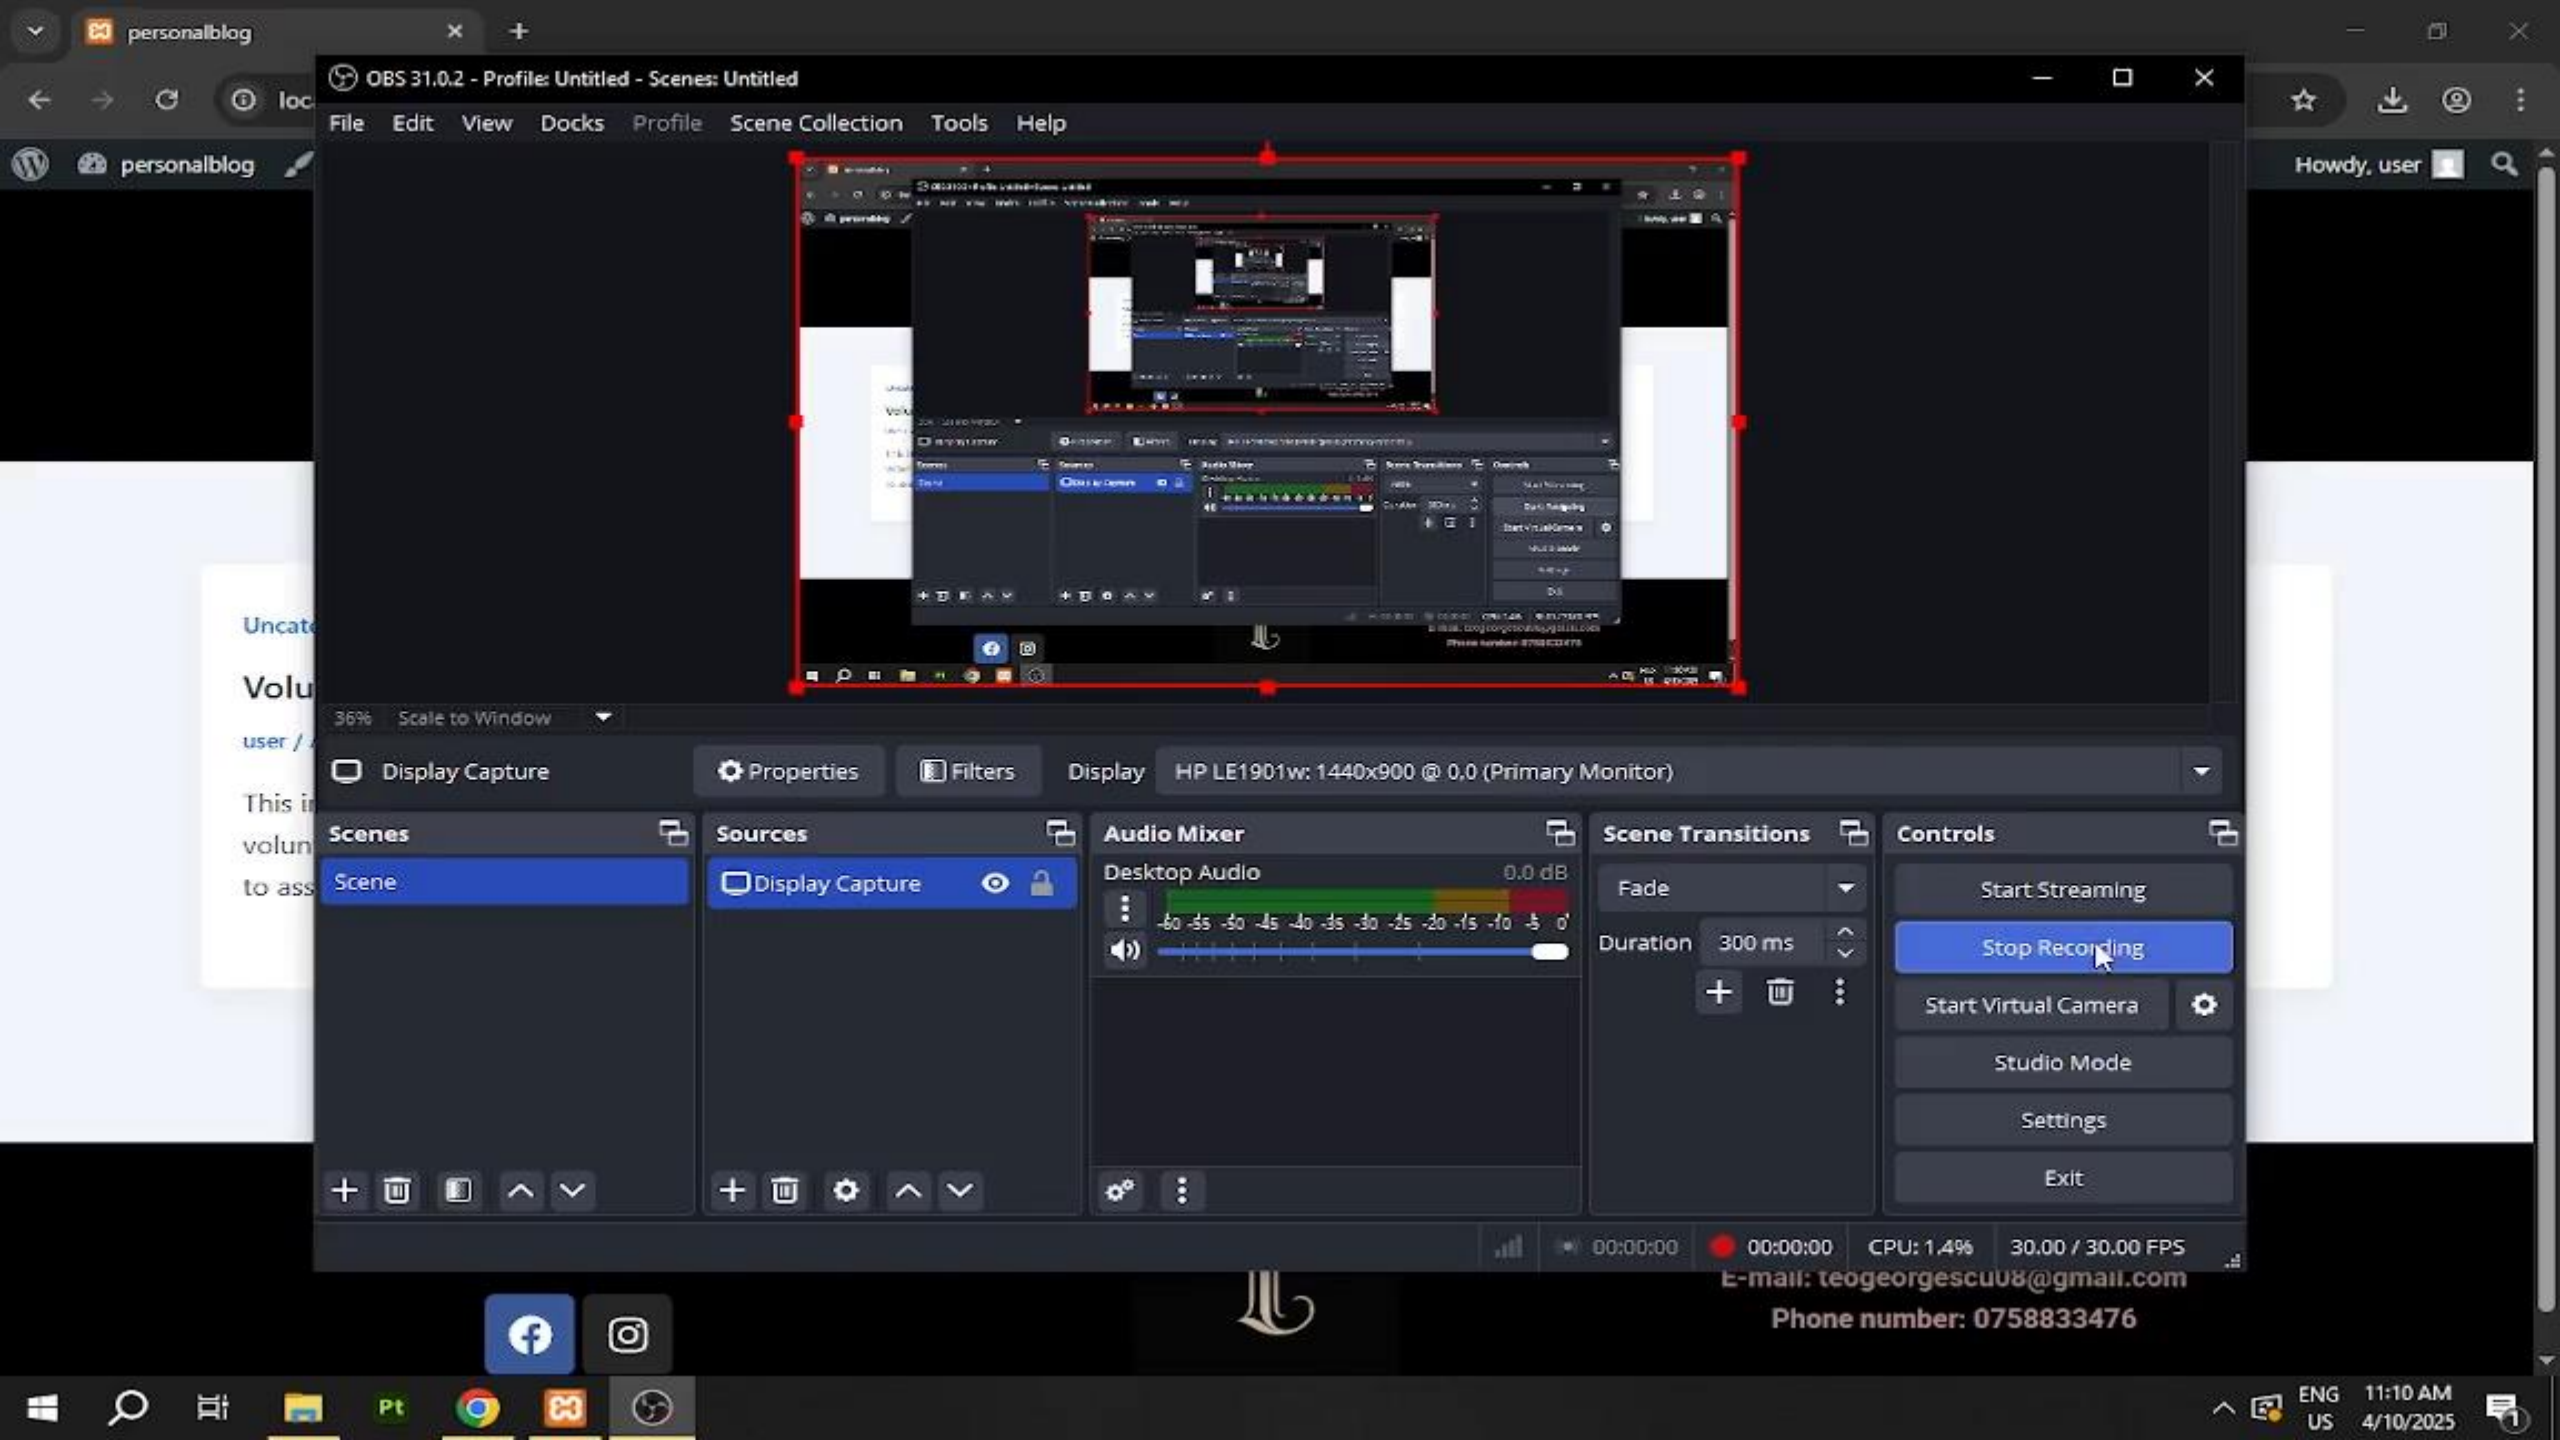

- **Project Overview – Capital Invest Website Recreation (WordPress)**
- *For this project, I recreated the website of **Capital Invest SRL**, a construction company using goal was to modernize their online presence and create a professional, user-friendly platform that company's core services and values.*
- **About the Company**  
***Capital Invest SRL specializes in residential and non-residential construction. With over 150 a strong local presence, it is a key player in the regional construction sector.***
- **Development Process**
- **Planning:** *Researched the company's background and analyzed its needs to determine the best the site.*
- **Design:** *Built a clean, responsive layout optimized for both desktop and mobile use.*
- **Pages:** *Included main sections like Home, About Us, Services, Projects, and Contact.*
- **Implementation:** *Used WordPress for easy content management and integrated SEO and plugins.*
- **Testing:** *Performed browser/device compatibility tests before final deployment.*
- **Outcome**  
***The new website provides a modern online image for Capital Invest and improves clients through better structure, accessibility, and design.***

# PERSONAL BLOG

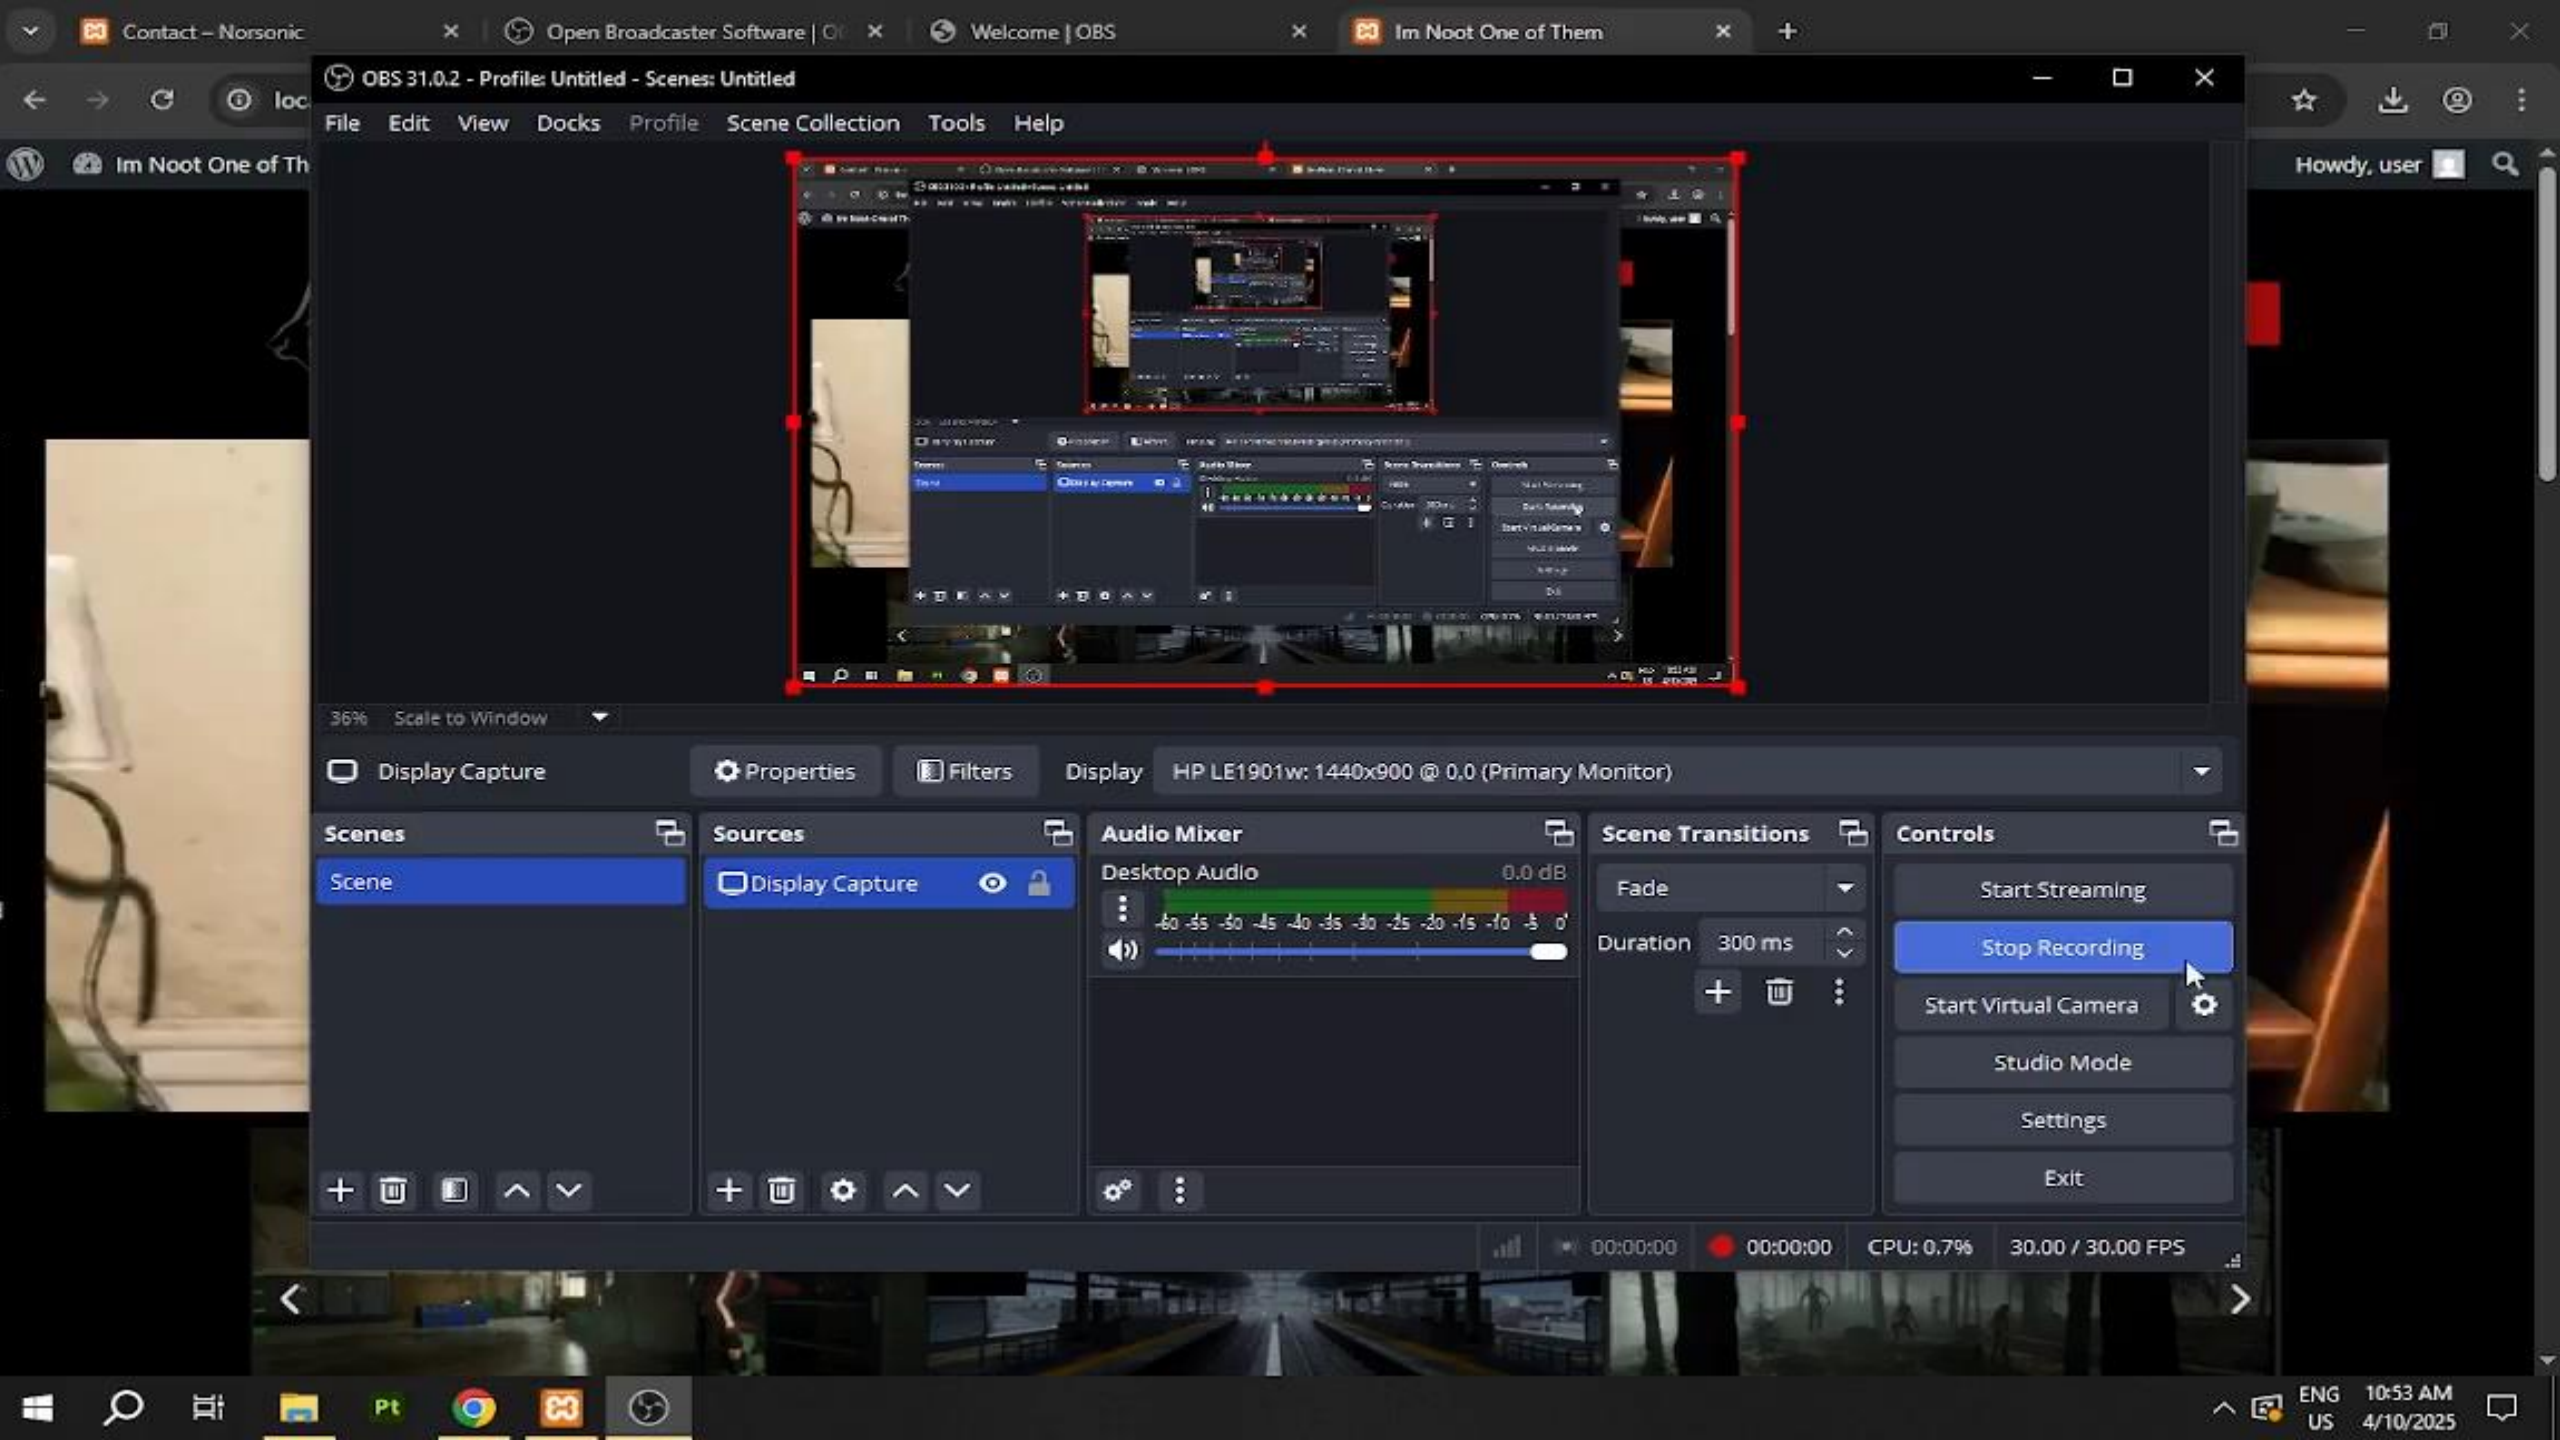

- Creating my **personal blog** was a journey filled with learning, patience, and creativity. It all started with a simple idea: the desire to have a space where I could share my thoughts, experiences, and passions. So, I decided to use WordPress, a user-friendly and versatile platform.
- **The initial steps** focused on choosing a design that truly reflected my personality. After exploring various themes and layouts, I found an aesthetic that aligned with my vision. Then, I customized every detail: from colors and fonts to the organization of categories and pages.
- The **technical part** was an exciting challenge. I learned to navigate different options, optimize pages, and add functionalities to enhance user experience. Although there were moments of difficulty, each obstacle helped me understand the platform better and come up with creative solutions.
- The final result is more than just a blog; it's a reflection of my passion, effort, and desire to create something unique. I hope this space will inspire others and bring value to those who visit.

# IM NOOT ONE OF THEM

- **"I'm Noot One of Them" – Game Overview**
- *"I'm Noot One of Them"* is a survival-based indie game currently in development. In this game, players are placed in a post-apocalyptic world where they must fight to stay alive alone, against relentless waves of zombies. With limited resources and no allies, survival depends on quick reflexes, strategy, and the ability to adapt.
- The game aims to deliver an intense, immersive experience that combines action, suspense, and exploration. As development progresses, features like crafting, dynamic environments, and evolving enemy behavior are being implemented to enhance gameplay depth.
- To support this project, I built a dedicated **WordPress website** that serves as a teaser and promotional platform. The site includes:
  - A visual preview of the game's concept and theme
  - Space for future updates, developer notes, and media
  - A design that reflects the dark, mysterious tone of the game
  - This project represents a creative blend of web development and game design, and it's constantly evolving.

# POLLUTION

- This is a beginner-friendly website created using WordPress, focused on raising awareness about pollution. The site consists of four informative paragraphs, each styled with different font sizes, colors, and fonts to make the content visually engaging and easy to follow. It aims to educate visitors about the causes, effects, and potential solutions to environmental pollution in a simple and accessible way.

Pollution is one of the most pressing environmental issues affecting the planet today. It comes in various forms, including air, water, soil, and noise pollution, all of which have detrimental effects on human health and ecosystems. Industrialization, urbanization, and modern lifestyles have significantly contributed to pollution levels, making it a global concern that requires urgent action. Without proper measures, pollution can lead to severe consequences such as climate change, loss of biodiversity, and health complications.

Air pollution is one of the most harmful types, primarily caused by emissions from factories, vehicles, and burning fossil fuels. It releases harmful substances like carbon monoxide, sulfur dioxide, and nitrogen oxides into the atmosphere, leading to respiratory diseases, heart problems, and even premature deaths. Additionally, air pollution contributes to global warming by increasing greenhouse gases, which trap heat and alter weather patterns. Efforts such as promoting renewable energy and reducing industrial emissions are essential in mitigating its effects.

Water pollution is another major environmental threat, often caused by the dumping of industrial waste, plastic pollution, and oil spills. Contaminated water sources pose serious health risks to humans and aquatic life, leading to diseases such as cholera and dysentery. Marine ecosystems suffer due to chemical runoff and plastic debris, which endanger marine species. To combat water pollution, it is necessary to implement strict waste disposal regulations, promote recycling, and encourage sustainable water management practices.

Land and noise pollution also have serious consequences. Land pollution results from excessive waste, deforestation, and the use of harmful chemicals in agriculture, which degrade soil quality and harm wildlife. Noise pollution, caused by traffic, construction, and industrial activities, affects mental and physical health, leading to stress, sleep disorders, and hearing loss. Addressing pollution requires collective action from governments, industries, and individuals to adopt eco-friendly practices and create a sustainable future for generations to come.

THANK YOU FOR THE OPORTUNITY OF  
PRESENTING MY PROGRESS!
